

Trust & Safety Operations: SLA Recovery Briefing

Queue Analytics, SLA Recovery & Workforce Capacity Optimization

Wesley Taguinod

Operations Business Analyst • 2,800 reviews, Sep 6 – Oct 5, 2026

THE BOTTOM LINE

Quality is strong and the SLA gap is not systemic. 93% of breaches sit in Violence, Hate Speech & TCO, and a 4-day high-risk mix shift (Sep 24–27) cut SLA to 41%.

Rebalancing existing capacity targets **≥95% SLA within 14 days, with zero new hires.**

Root Cause: Where the SLA Drag & Backlog Originate

Media multiplier: AHT by content type

Video = 28% of volume, 69% of handling hours • short video 6.8x, live 12x text AHT

Daily SLA attainment vs. 95% target

Volume 95 → 89/day	High-risk mix 24% → 43%	Avg. TAT 134 → 241 min
-----------------------	----------------------------	---------------------------

719 egregious items (26% of volume) sit entirely in Violence, Hate Speech & TCO and trigger 5.5-hour shift caps with 30-minute wellness rotations. Capacity cannot be recovered by extending shifts; it must be recovered by routing.

Workforce Dynamics: Speed vs. Quality Matrix

Speed vs. quality: 15 agents by tenure

- **Senior • AGENT_12-15** 99.8% QA • 54.0s AHT (84s on manual)
- **Core • AGENT_04-11** 99.2% QA • 48.0s AHT (97s on manual)
- **New Hire • AGENT_01-03** 94.5% QA • 62.7s AHT (125s on manual)

New hires made 4 of 7 audit errors (6.8% error rate vs. 1.1% tenured); 3 of the 4 were false positives.

Capacity gap under the surge mix

Standard 8.0h shift	4.80 h/day
25% shrinkage • 80% occupancy	
Egregious 5.5h shift	3.08 h/day
30% shrinkage • 80% occupancy	
Handling time per item	49.7s → 65.3s
Egregious share of hours 47% → 53%	

Sep 24-27, same daily volume

Required	19 FTEs
Active roster	15 FTEs

-4 FTE deficit

Model assumes 15 FTEs sized to the pre-surge mix

Action Plan: Rebalance Capacity, Not Headcount

ACTION 1

Mix-triggered cross-queue flex staffing

- When Violence + TCO exceed 35% of daily intake, flex 4 FTEs from Spam & Fraud
- Spam & Fraud use 22% of handling hours and Spam is already 75% automated

ACTION 2

Smarter video routing & triage pilot

- Route video & live to Core and Senior agents; new hires are 20–41% slower on them
- Pilot wider auto-triage in Violence (33% automated) and TCO (24%) with QA sign-off

ACTION 3

New-hire calibration & wellness scheduling

- Daily 20-minute calibration with senior mentors on over-enforcement (false positives)
- Automate rotation: 5.5h caps and ≤ 2 consecutive hours in egregious queues

0 new hires

and zero external software spend

78.2% → $\geq 95\%$

account SLA target within 14 days

56.7% → $\geq 95\%$

TCO 1-hour emergency SLA target

Anticipated Questions & Defensible Responses

Won't Spam SLA collapse if we flex capacity out of Spam & Fraud?

Unlikely. Spam runs at 12.3s AHT and 96.4% SLA with 75% of items automated, and Spam & Fraud together use only 22% of handling hours. Flexing is triggered only on high-risk mix days.

Why not mandate 8-hour shifts for everyone to clear the backlog?

All 719 egregious items sit in the high-risk queues, and duty-of-care caps exposure at 5.5 hours. Violence QA already dipped to 88.9% during the surge (9 audits). Rotation protects accuracy.

Does widening automated triage risk more false positives?

We pilot with QA sign-off. Today auto-approved items audit at 100% (75 audits) and auto-rejected at 97.3% (81 audits), and appeals overturn only 15.8% of disputed decisions.
